The Automatic Genset Controller, AGC, is a flexible control unit containing all necessary functions for protection and control of a genset. It can be used as a single unit for one genset, or a number of AGCs can be connected in a complete power management system for synchronising projects, islanded or paralleled to the mains.

## **Home | Eastern Surplus**

The MP36PH-3S uses a 16-cylinder EMD 645F3B diesel engine as its prime mover, capable of generating 3,600 hp. Head-end power (HEP) is generated by a static inverter that receives its power through connections to the prime mover (hence the "S" (static) designation). Compared to a locomotive with a separate HEP generator, the prime mover must constantly maintain a higher RPM in order to supply ...
