In physics, a force is any interaction that, when unopposed, will change the motion of an object. A force can cause an object with mass to change its velocity (which includes to begin moving from a state of rest), i.e., to accelerate. Force can also be described intuitively as a push or a pull. A force has both magnitude and direction, making it a vector quantity.

Force - Wikipedia

1. Introduction. In industrial and engineering applications, the use of granular materials such as powders, seeds, and soils is unavoidable []. Therefore, further studies and improvements are currently needed to optimize and facilitate the process of handling and manufacturing bulk granular materials.
