Level of measurement or scale of measure is a classification that describes the nature of information within the values assigned to variables. Psychologist Stanley Smith Stevens developed the best-known classification with four levels, or scales, of measurement: nominal, ordinal, interval, and ratio. This framework of distinguishing levels of measurement originated in psychology and is widely ...

Spectroscopy / s p ? k ? t r ? s k ? p i / is the study of the interaction between matter and electromagnetic radiation. Historically, spectroscopy originated through the study of visible light dispersed according to its wavelength, by a prism. Later the concept was expanded greatly to include any interaction with radiative energy as a function of its wavelength or frequency, predominantly ...

Abstract: How do we measure phenomena that cannot be directly observed? The principal aim of this paper is to demonstrate why factor analysis technique is the best answer to this question. Methodologically, we use a database with different indicators of democracy to show how principal component analysis can be employed to measure the two polyarchy dimensions proposed by Robert Dahl (1971 ...
