A road surface or pavement is the durable surface material laid down on an area intended to sustain vehicular or foot traffic, such as a road or walkway.In the past, gravel road surfaces, cobblestone and granite setts were extensively used, but these surfaces have mostly been replaced by asphalt or concrete laid on a compacted base course.Road surfaces are frequently marked to guide traffic.

Green Infrastructure: Permeable pavement can be an important tool for retention and detention of stormwater runoff. Permeable pavement may provide additional benefits, including reducing the need for de-icing chemicals, and providing a durable and aesthetically pleasing surface.

## Construction specifications for permeable pavement

Evaluating Transportation Land Use Impacts Victoria Transport Policy Institute 2 Introduction Land use development patterns (also called urban form, built environment, community design, spatial development, and urban geography) refer to human use of the earth's surface, including the location, type and design of infrastructure such as roads and buildings.
