In mathematics, a conformal map is a function that preserves orientation and angles locally. In the most common case, the function has a domain and an image in the complex plane.. More formally, let and be open subsets of \mathbb{C} . A function $f : D \rightarrow \mathbb{C}$ is called conformal (or angle-preserving) at a point z_0 if it preserves angles between directed curves through z_0 , as well as preserving orientation (i.e ...
