Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...

Mathematics. In mathematics, a function is a rule for taking an input (in the simplest case, a number or set of numbers) and providing an output (which may also be a number). A symbol that stands for an arbitrary input is called an independent variable, while a symbol that stands for an arbitrary output is called a dependent variable. The most common symbol for the input is x , and the most ...

Diferenciación y diferenciabilidad

Diferenciación y diferenciabilidad. Una función de una variable es diferenciable en un punto si su derivada existe en ese punto; una función es diferenciable en un intervalo si lo es en cada punto perteneciente al intervalo. Si una función no es continua en c, entonces no puede ser diferenciable en c; sin embargo, aunque una función sea continua en c, puede no ser diferenciable.
