Homosynaptic Plasticity (or also homotropic modulation) is a change in the synaptic strength that results from the history of activity at a particular synapse. This can result from changes in presynaptic calcium as well as feedback onto presynaptic receptors, i.e. a form of autocrine signaling. Homosynaptic plasticity can affect the number and replenishment rate of vesicles or it can affect the ...

A chemical property is any of a material's properties that becomes evident during, or after, a chemical reaction; that is, any quality that can be established only by changing a substance's chemical identity. Simply speaking, chemical properties cannot be determined just by viewing or touching the substance; the substance's internal structure must be affected greatly for its chemical ...

About this Journal: International Journal of Engineering Research & Technology is a peer-reviewed, Open Access journal that publishes original research & review articles in all major branches of engineering. We have adopted a fully open access publishing model which allows open global access to its published content so anyone can download & read articles round the clock totally free of cost.
