Over-representation (or enrichment) analysis is a technique for determining if a set of categories are present more than would be expected (over-represented) in a subset of your data.

Tutorial:OverRepresentation - OpenTutorials

Finite Element Analysis Using ANSYS Mechanical: Results-Interpretation. The following ANSYS tutorials focus on the interpretation and verification of FEA results (rather than on obtaining an FEA solution from scratch).The ANSYS solution files are provided as a download.

ANSYS Learning Modules - SimCafe - Dashboard

Absolute maximum transverse shear stress and absolute maximum normal bending stresses in tension and compression will be calculated for you. Evaluate the different stresses at specific points along the beam, with colored scaled results to display these in an easy to ready format.

The rainflow-counting algorithm (also known as the "rain-flow counting method") is used in the analysis of fatigue data in order to reduce a spectrum of varying stress into a set of simple stress reversals. Its importance is that it allows the application of Miner's rule in order to assess the fatigue life of a structure subject to complex loading. The algorithm was developed by Tatsuo Endo ...

Sexual harassment in education in the United States is an unwelcome behavior of a sexual nature that interferes with an American student's ability to learn, study, work or participate in school activities. It is common in middle and high schools in the United States. Sexual or gender harassment is a form of discrimination under Title IX of the Education Amendments of 1972.
