Resources for SAFER Matrix. The Survey Analysis for Evaluating Risk™ (SAFER™) is a transformative approach for identifying and communicating risk levels associated with deficiencies cited during surveys.

Survey Analysis for Evaluating Risk™ (SAFER™) Matrix

The purpose of this page is to provide resources in the rapidly growing area of computer-based statistical data analysis. This site provides a web-enhanced course on various topics in statistical data analysis, including SPSS and SAS program listings and introductory routines. Topics include questionnaire design and survey sampling, forecasting techniques, computational tools and demonstrations.

Principal component analysis is a statistical technique that is used to analyze the interrelationships among a large number of variables and to explain these variables in terms of a smaller number of variables, called principal components, with a minimum loss of information.. Definition 1: Let $X = [x_i]$ be any $k \times 1$ random vector. We now define a $k \times 1$ vector $Y = [y_i]$, where for each i the ...
